LogicFolds

CAPABILITIES

From first enquiry to paid invoice, without the retyping.

LogicFolds builds automations for home service companies and real estate agencies that lose time moving information between their sales and accounting systems. We work with business owners who have a repeated process that is slow, manual, or dependent on one person remembering to do it.

We build each automation around the way your business already works, keep a person in charge of the decisions that matter, and make sure you can see what happened at every step.

WHAT GETS AUTOMATED

Enquiry follow-ups

Every new enquiry gets a follow-up automatically, so no lead goes quiet because someone was busy.

Invoices when a deal is won

The invoice is created the moment a deal is won, from details you already entered.

Payment reminders

Reminders send themselves, so overdue invoices get chased without anyone having to remember.

A weekly report

One report arrives every week, with no copy and paste.

HOW WE WORK

Step 1

Free Automation Audit

A 30-minute call to find where the retyping happens.

Step 2

Your one-page plan

The three automations that would save the most time.

Step 3

First Automation

One automation built and running, delivered in 2 weeks.

Step 4

Monthly Support

Monitoring, fixes, and small changes.

WORKS WITH YOUR TOOLS

Odoo	Connected to your sales and accounting
Zoho	Connected to your sales and accounting
Custom-built	Tools and integrations, when no off-the-shelf tool fits

SELECTED SYSTEMS

What we have built.

Every build is labeled a Prototype or a Template. Sales and finance builds come first. The interface views on our site use synthetic, anonymised data.

System	Domain	What it does	Status
Finance operations ERP	Platform	Brings reimbursements, invoices, approvals, payments, and accounting entries into one place, with the right access for each role and a full history of changes.	Prototype
AI opportunity research	Sales	Researches each sales lead, finds a real business problem, and scores the best-fit solution before anyone reaches out.	Prototype
Network research	Growth	Finds reputable employers for a target role across 1,794 connections, maps verified direct introductions, and drafts evidence-based outreach. Covered by 9 automated tests.	Prototype
Benefits claim verification	Public sector	Combines residency, income, and eligibility checks into one clear decision, with the reasons written down.	Prototype
Denial appeal workflow	Healthcare	Takes an insurance denial from intake to submission, with a person reviewing before it is sent. 19 steps, 3 quality checks.	Template
Prior authorization package	Healthcare	Matches clinical evidence to the insurance criteria, drafts the request, and sends it for review before submission. 5 stages.	Template
Critical lab alert handoff	Clinical	Routes urgent results to the right responder with acknowledgement and escalation.	Template
Protocol deviation review	Clinical quality	Checks visits against the study rules, flags anything outside them, and marks each finding as major or minor, using the study document.	Template

WORKING TOGETHER

Three ways to work together.

Free Automation Audit

A 30-minute call plus a one-page plan of the three automations that would save the most time. Free.

Free

First Automation

One automation built and running. Fixed price and fixed delivery time.

USD 1,200 · Delivered in 2 weeks

Monthly Support

Monitoring, fixes, and small changes.

USD 250 per month
