LogicFolds

CAPABILITIES

From first enquiry to paid invoice, without the retyping.

LogicFolds builds automations for home service companies and real estate agencies that lose time moving information between their sales and accounting systems. We work with business owners who have a repeated process that is slow, manual, or dependent on one person remembering to do it.

We build the software around the workflow, not just the prompt: bounded agent behaviour, traceable inputs, explicit decision paths, and human approval gates where a decision carries real consequences.

WHAT WE BUILD

Agentic orchestration

Coordinate agents and people across complex operations, with the handoffs made explicit.

Business rules · Human review · Audit trails

Decision intelligence

Turn documents and business context into bounded, explainable decisions.

Extraction · Grounding · Validation

Platforms and integrations

Ship the software around the workflow so it runs inside the systems you already use.

FastAPI · MCP and APIs · Deployment

HOW WE WORK

Step 1

Discover

Workflow, friction, risk, and the success metric.

Step 2

Orchestrate

Agents, rules, decisions, and human review.

Step 3

Integrate

Data, APIs, systems, and the product surface.

Step 4

Prove and launch

Evaluate, deploy, hand off, improve.

TECHNICAL FOUNDATION

Orchestration	UiPath Maestro, agentic workflows, human-in-the-loop review
Models and grounding	Gemini, LLM APIs, RAG pipelines, evaluation harnesses
Systems	FastAPI, MCP and API integrations, PostgreSQL, Docker, Playwright

SELECTED SYSTEMS

Workflow designs and platforms we have built.

Every build is labeled a Prototype or a Template. Sales and finance builds come first. The interface views on our site use synthetic, anonymised data.

System	Domain	What it does	Shape
Finance operations ERP	Platform	Centralises reimbursements, invoices, approvals, payments, journals, and intercompany work with role-based access and audit history.	Prototype
AI opportunity research	Sales	Researches each lead, grounds a real business problem, and scores the best-fit AI solution before outreach. Gemini-powered.	Prototype
Role-based network intelligence	Growth	Filters reputable employers for a target role across 1,794 connections, maps verified first-degree routes, and drafts grounded outreach. Daily caching, 9 automated tests.	Prototype
Benefits claim verification	Public sector	Combines residency, income, and eligibility checks into one explainable decision workflow with a grounded rationale.	Prototype
Denial appeal orchestration	Healthcare	Coordinates intake, extraction, code confirmation, policy research, evidence matching, review, and submission across 19 nodes with 3 evaluators.	Template
Prior authorization package	Healthcare	Maps clinical evidence to payer criteria, drafts the request, and routes it through review and submission across 5 stages.	Template
Critical lab alert handoff	Clinical	Routes urgent results to the right responder with acknowledgement and escalation.	Template
Protocol deviation review	Clinical quality	Checks study rules, detects deviations, and classifies major or minor findings from PDF-grounded context.	Template

WORKING TOGETHER

Three ways to work together.

Free Automation Audit

A 30-minute call plus a one-page plan of the three automations that would save the most time. Free.

Free

First Automation

One automation built and running. Fixed price and fixed delivery time.

USD 1,200 · Delivered in 2 weeks

Monthly Support

Monitoring, fixes, and small changes.

USD 250 per month
