

Muhammad Ajlal Haider

✉ ajlalgoraya333@gmail.com ☎ +92 321 8600333 📍 Lahore, Pakistan 🌐 [LinkedIn](#)

Python developer with 2+ years of experience specializing in backend frameworks like FastAPI and Flask, and databases including PostgreSQL and MongoDB. Delivered scalable AI-driven applications focused on semantic analysis, web data extraction, and bioinformatics data processing, achieving ~20–30% improvements in system efficiency and client outcomes. Engineered advanced file handling systems using the TUS protocol and real-time WebSocket tracking for large scientific datasets. Skilled in leveraging specialized tools such as LangChain, AgentQL, and the TUS protocol to build innovative solutions. Collaborative full-stack developer with expertise in JavaScript, NodeJS, and ExpressJS, known for driving impactful software optimizations and enhancing cross-functional project delivery.

WORK EXPERIENCE

Associate Software Engineer – CodeNinja INC. 06/2024 – Present | Lahore

- Developed cutting edge solutions for clients like NEXCO Analytics.
- Designed and implemented innovative back-end architectures using FastAPI and Flask, leveraging Microservices Architecture for scalability and modularity.
- Collaborated with cross-functional teams within Agile Methodologies to enhance project delivery and client satisfaction.
- Problem solved performance bottlenecks by optimizing existing systems for scalability, improving response times by up to 30%.
- Provided 24/7 client support, ensuring timely resolution of issues and maintaining high client satisfaction through effective communication and problem-solving.

Associate Software Engineer – Axiom World 06/2023 – 05/2024

- Spearheaded Odoo development and consulting initiatives.
- Designed and implemented ERP solutions for diverse local and global clients.
- Optimized business processes to enhance operational efficiency.
- Collaborated with cross-functional teams to deliver tailored software solutions.
- Conducted training sessions for clients to maximize ERP system utilization.

EDUCATION

FAST National University of Computer and Emerging Sciences – Faisalabad, Pakistan 06/2023

Bachelors in Computer Science

Readers Group of Colleges – Sargodha, Pakistan 04/2018

Intermediate in Pre Engineering

- New Responsibility

SKILLS

Python, FastAPI, Flask, PostgreSQL, MongoDB, LangChain, Odoo, XML, JavaScript, NodeJS, ExpressJS, GIT, Docker

PROJECTS

ONEX 08/2024 – 05/2025

- Developed and implemented a comprehensive full-stack web application for bioinformatics data analysis, featuring:
- Engineered a scalable FastAPI backend with secure user authentication and real-time file processing for large-scale genomic data (FASTQ, CSV, TSV formats).
- Implemented robust file upload system using TUS protocol for reliable handling of large scientific datasets with automatic validation and processing of bioinformatics file formats.
- Designed RESTful APIs for RNA sequencing analysis, mass spectrometry data processing, and BRB-seq analysis workflows.
- Built user management system with project sharing capabilities, email notifications, and role-based access control.
- Integrated cloud storage solutions (Google Drive) and public genomics databases (GEO) for seamless data import.
- Developed real-time progress tracking using WebSocket connections for long-running bioinformatics analyses.
- Technical Stack: Backend: Python, FastAPI, SQLAlchemy, WebSockets; Data Processing: Pandas, NumPy; File Handling: TUS Protocol, Async I/O; Authentication: JWT, OAuth2; Database: PostgreSQL; DevOps: Docker, Docker Compose.

AI-Powered Restaurant Menu Data Collection System 04/2025 – Present

- Architected an intelligent web data extraction system combining traditional web scraping with modern AI tools.

- Integrated AgentQL and browser-use frameworks to enable AI-driven navigation and content understanding.
- Developed sophisticated menu detection algorithms using semantic analysis and pattern recognition.
- Implemented resilient error handling and recovery mechanisms to process dynamic web content across various restaurant platforms.
- Created a scalable system capable of handling multiple concurrent restaurant website processing.
- Technical Stack: Python, AgentQL, browser-use, Playwright, RegEx, JSON.
